Projects

Hired Dream Job

A platform for managing career. A single place where job candidates and employers can find jobs and employees respectively
Source: Live | Client | Server
Features
- Candidates and employers can search for jobs, employers and candidates respectively. Employers can post and update jobs. Candidates can apply to those jobs and employers will get notification in real time.
- Both types of user can update their profile and candidates can post blogs to showcase their skills.
- Used MVC architecture to design this huge project. No custom token used, only firebase to ensure top security. Used socket.io to notify users. Also used mongodb aggregation to reference data.
- Full website is responsive to support all types of device. In find jobs and employers page all types of sorting are added.

Technologies: React, React Router, Firebase, NodeJS, ExpressJS, MongoDB, socket.io

Your Book

Used book reselling e-commerce website
Source: Live | Client | Server
